THE HUDSON RIVER

RE-EMINENT in natural beauty, the Hudson begins to gather strength as a well-defined river about one hundred and eighty miles from New York City, although the actual source is near the center of the Adirondack Mountains. For thirty miles further the bed is narrow and obstructed with rocks, and its career as a stately and useful highway of commerce actually commences at the city of Troy, one hundred and fifty miles from the sea. From this point no river in the world, not excepting the famous Rhine, can offer to the traveler such a variety of beautiful and sublime lowland and highland scenery with such a wealth of legendary or historical associations.

Long before the discovery of the "River of the Manhattes," in 1609, by the intrepid Hendrik Hudson, an English sailing-master in the service of the Dutch East India Company, the savage tribes along the banks of the great stream had felt its charm and had invested it with romance from source to mouth. The staid Netherlanders were not a sentimental race, but they also succumbed to the witchery of the Hudson, and peopled every valley and highland with fairies, sprites or goblins.

The importance of the Hudson as a direct route from the coast at New York to the strongholds of Canada was demonstrated under English rule. In the hope of holding this strategic highway the valley was occupied by both the American and British forces during the Revolution and it became the theatre of war for several years and the scene of many sanguinary struggles on land and water. It was here that the blackest page in American history, the treason of Arnold, was planned, and here it was defeated by incorruptible patriotism.

From all this has developed a mass of legend and tradition, an inexhaustible mine, in which the "Genius of Sunnyside," Washington Irving, found abundant material and inspiration for the entrancing tales which first drew the attention of the world to the wonderful beauty of this lordly river.

The inhabitants of the Hudson Valley have cultivated the arts of peace undisturbed since the Revolution. It was here that the application of steam as a propelling power for vessels was put in practical operation, and the opening of the Erie Canal and the wholesale building of railroads along either shore have enabled the populous and prosperous river cities to build up an immense local trade and to promote manufacturing enterprises of world-wide reputation. But no amount of commerce or trade adds to the great and enduring charm of the Hudson. This will forever lie in its enchanting scenery and romantic memories, neither of which an aroused and enlightened public opinion will permit to be obscured or destroyed by ruthless private interests.

THE NORTH RIVER, NEW YORK

The Hudson flowing by the island of Manhattan is known as the North River. The available water front on the New York side extends for thirteen miles, but is not all in use at present. From the Battery to 42d Street the shore is crowded with steamship piers, ferry slips and watchhouses. On the further shore are the immense properties of the Pennsylvania Railroad in Jersey City and the docks of the great transatlantic companies in Hoboken. The bosom of the North River is always covered with craft of every description, and the amount of traffic daily is something enormous.

GRANT'S TOMB, RIVERSIDE DRIVE, NEW YORK

This memorial, one of the largest and most imposing monuments in the world, is a conspicuous object from the Hudson. It is 160 feet high and covers an area of 10,000 square feet. It is built of white Maine granite and cost \$800,000, the voluntary contribution of 70,000 people, through the Grant Monument Association. Two red porphyry sarcophagi in the crypt under the dome hold the remains of the great commander and his wife. The monument was dedicated in 1897, with impressive ceremonies, by President William McKinley.

COLUMBIA UNIVERSITY, NEW YORK

This great University on Morningside Heights, overlooking the Hudson, is New York's foremost educational institution. It now occupies fifteen college buildings covering 18 acres. The central structure is the Low Memorial Library, erected by Seth Low in memory of his father. It contains 350,000 volumes and cost \$1,000,000. Other buildings are the University Hall, Schermerhorn Hall (biology), Havemeyer Hall (chemistry), the Physics Building, Earl, South and Fayerweather Halls, and the Engineering Building, containing the machinery needed in practical instruction.

FORT LEE, NEW JERSEY

The town of Fort Lee is situated opposite Washington Heights, New York. The Palisades begin here in a huge promontory which was fortified in 1776 by the erection of two redoubts, the larger named Fort Lee in honor of General Charles Lee. It was abandoned by the Americans after the capture by Lord Howe of Fort Washington on the opposite shore. Fort Lee is now a popular resort. A great hotel occupies a commanding location, and there are abundant means of refreshment and amusement. Several steamers connect with New York during the summer months.

VAN CORTLANDT MANSION, VAN CORTLANDT PARK

Northeast of Spuyten Duyvil, a little back from the eastern bank of the Hudson, is the Van Cortlandt Park, a new and large recreation ground containing 1,082 acres. The historic home of the Van Cortlandts, built in 1748, is yet in an excellent state of preservation. During the struggle for independence it was occupied for a time by General George Washington. The house and land were purchased from the Van Cortlandt family for park purposes. The Park is almost in its original condition of rocky woodland, lake and stream.

THE SOUTHERN END OF THE PALISADES

The famous Palisades of the Hudson begin near Fort Lee, New Jersey, and form the western wall of the river for ten miles, extending to the Tappan Zee. It is a rough basaltic trap rock with a precipitous front, nearly uniform in height, rising from an altitude of 350 feet near Fort Lee to 550 feet at the northern extremity. The peculiar vertical formation, characteristic of basalt, suggested the name to the early discoverers. This long gray wall, half bare of trees and practically uninhabited, is one of the most extraordinary natural wonders of America.

The Terrace

Minarets

Close View

THE PALISADES OF THE HUDSON

Nothing can be more picturesque than this long gray rampart with its rocky summit eroded or rent into countless turrets and minarets. A closer view reveals a grandeur of height and a wealth of color which cannot be appreciated from the center of the river. It is worthy of note that only three breaks in the entire length of the Palisades are of sufficient width to allow wagon roads to descend to the water's edge.

THE NORTHERN END OF THE PALISADES

The Palisades reach their highest elevation near Indian Head, directly opposite Hastings on the eastern shore. These rocky battlements practically cease at the boundary line between New Jersey and New York, where the Hudson begins to widen into the Tappan Zee. By the old Dutch river voyagers the end of the "Verdrietege Hoek" (grievous place) as they called the Palisades, was always approached with stolid delight.

THE PALISADES FROM LAKE AVENUE WATER TOWER, YONKERS

South and north of the business center of Yonkers are many splendid avenues bordered with beautiful residences. Many of the men who have won fame in the commercial, financial or literary life of New York have made their homes here. Opposite on the further shore of the Hudson extends the gray walls of the Palisades. The contrast between the two banks of the river is remarkable—the western a desolate mass of rock, the eastern an abode of wealth and refinement.

THE OLD MANOR HALL, YONKERS

The old Manor Hall is the pride of the city of Yonkers. The front part was built in 1682 by Frederick Philipse, the first Lord of the Manor of Philipsburg. It was completed by the addition of the back part in 1745. The building remained in the possession of the Philipse family until 1779, when because of the toriosity of the Frederick Philipse of that day the third Lord of the Manor it was confiscated by an act of the Legislature of New York. It was used by private families until 1868. Since 1872 it has been the City Hall of Yonkers. The old structure has had the best of care and is a perfect specimen of colonial architecture.

RESIDENCE AND GRAVE OF WASHINGTON IRVING

Washington Irving was the first American, as Bryant has pointed out, to adequately describe the beauties of the Hudson. His setting of the old legends of the great river has made them an imperishable part of American literature. The home of the distinguished author was at "Sunnyside," a vine-clad cottage surrounded by grand trees in Irvington near Tarrytown, overlooking the Tappan Zee. Although much ahead, this was his home from 1857 until his death November 28, 1859. Irving is buried in the cemetery at Sleepy Hollow. The grave is marked by a plain slab of white marble bearing the name and dates only. The path leading to the plot is worn smooth by the feet of visitors.

SLEEPY HOLLOW SCENES

Sleepy Hollow is the narrow valley of the Pocantico Creek which flows into the Hudson about half a mile above Tarrytown. This quiet spot was made famous the world over by Washington Irving's tale of Ichabod Crane and his unsuccessful wooing of Katrina Van Tassel. Irving's description of Sleepy Hollow as "a little valley, or rather a lap of land, among high hills, which is one of the quietest spots in the whole world" yet remains true. The lower view shows the bridge across the Pocantico over which galloped the wretched schoolmaster with the Headless Horseman in mad pursuit.

RIVER FROM KINGSLAND'S POINT, TARRYTOWN

Kingsland's Point projects into the Hudson just north of Tarrytown. It is marked by a lighthouse. Here the river has widened into the broad Tappan Zee, so named by the early Dutchmen, from the Tappan Indians whom they found along its western shore. This beautiful expanse of water, over two miles wide, is a pleasing relief from the monotony of the Palisades, and is lined on both sides with places famous in history or in the romance of the "Gems of Sunnyside."

MONUMENT COMMEMORATING THE CAPTURE OF ANDRE, TARRYTOWN

Half way to Sleepy Hollow on Broadway stands this fine monument surmounted by a bronze statue of John Paulding. The inscription reads: "On this spot the 25th day of September, 1789, the Spy, Major John Andre, Adjutant General of the British Army, was captured by John Paulding, David Williams and Isaac Van Wart, all Natives of this County." Andre had safely passed the American pickets and was left by Dr. Smith almost within sight of the British lines. He was stopped by the three men, an irregular outpost, who searched him and discovered the incriminating papers in his stockings. Andre was sentenced by a court-martial and hung as a spy upon a hilltop in Tappan. His three captors were awarded medals and pensions by Congress.

STONE HOUSE ON TREASON HILL, HAVERSTRAW

This old stone house was the scene of the culmination of the negotiations between General Benedict Arnold and Major John Andre for the surrender to the British leader, Sir Henry Clinton, of West Point and other important defences held by the American forces. It stands prominently on the hillside about a mile north of the Haverstraw station on the West Shore Railroad. The eminence is known as Treason Hill. Here Andre passed the day of September 22, 1789, after the early departure of the traitor to his post. In the evening accompanied by Dr. Joshua Hett Smith, his host, Andre set forth to pass the American lines, an attempt frustrated by three patriots near Tarrytown.

STONY POINT

The rocky promontory of Stony Point, brilliant in American history, juts forth from the west bank of the Hudson about three miles below Peekskill. It was strongly fortified by the British during the Revolution. Washington determined upon its capture and assigned Mad Anthony Wayne to the task, who, on the evening of July 15, 1779, silently led 1,200 Americans to the base of the hill. The assault began at midnight. In the face of a fierce storm of bullets and grape the patriots swept over the parapet and carried the works with the bayonet. Five hundred prisoners and nearly \$200,000 worth of ordnance and supplies were captured. Thirty-three acres, covering the field of the exploit, were purchased by the State of New York a few years ago. A lighthouse now crowns the eminence.

SOUTHERN GATEWAY TO THE HIGHLANDS OF THE HUDSON

The "Southern Gateway" is formed by Dunderberg (Thunder Mountain) on the left bank and Manito on the right, both rising to an altitude of more than 1,000 feet. Beyond Manito is the profile of Anthony's Nose. During the Revolution the river was strongly defended here where the banks were high and curved and the rough hills were a protection against flank attacks. In 1777, between Dunderberg and Bear Mount, Sir Henry Clinton led the British and Hessians to a successful assault on Forts Clinton and Montgomery, and by the same road, in 1779, the Continentals of Mad Anthony Wayne marched silently to the brilliant capture of Stony Point.

DUNDERBERG FROM PEEKSKILL

The pretty town of Peekskill, settled by the Dutch in 1664, is located upon the eastern bank of the Hudson almost directly opposite Dunderberg Mountain. Here the river makes a great sweep through the "Southern Gateway to the Highlands." The enormous mass of the Dunderberg and Bear Mountains fills the western horizon. It was upon Dunderberg in the good old times that the rollicking goblins were wont to make merriment during the sudden thunder-gusts which swept down from the Highlands upon the old Dutch river navigators.

ANTHONY'S NOSE

The curious ridge, 1,228 feet high, which slopes down to the river on the right above Manito bears the extraordinary name of Anthony's Nose. Just why is hardly understood by sober-minded historians, although Irving has made the matter the subject of one of his droll Knickerbocker traditions. In 1777 a boom and chain were moored from Anthony's Nose to a point of rocks on the west bank near the present iron railroad bridge yet known as Chain Point. This obstruction was destroyed by the British after the capture of the Highland forts.

THE HUDSON FROM WEST POINT

West Point, about 50 miles from New York, was an important fortified post during the Revolution. It is now famous as the seat of the United States Military Academy, the finest military college in the world. Nearly 5,000 Cadets have graduated since its formal opening in 1802. From the Siege Batteries looking north may be obtained a wonderful view of the "Northern Gateway," with Old Cro' Nest and Storm King on the left and Bull Hill, Mount Taurus and Breakneck on the right. In 1779 a chain was stretched across the Hudson from Gee's Point to Constitution Island which appears at the right foreground of view. Sixteen links of this chain are preserved at Trophy Point.

AN INSPECTION AT WEST POINT

The Cadets receive a training which is as rigid as it is thorough and practical. The two essential military virtues, diligence and faithfulness, are taught from the beginning, not only in the recitation rooms, but on the parade ground and in the countless military exercises. Promptness, obedience, efficiency and neatness are sternly insisted upon until they become fixed habits. A high code of honor is made a part of the character of every graduate, partly by the military discipline, partly by the splendid traditions of the Cadets themselves.

LIGHT HOUSE AND OLD CRO' NEST

The massive rounded crags of Old Cro' Nest overshadow the left bank of the Hudson a few miles above West Point. The name, probably suggested by the abundance of crows which frequent the summit, is applied to the whole ridge which fronts the river for a distance exceeding two miles and attains a height of 1,416 feet at the highest point. Cro' Nest has a place in American literature, being the scene of Joseph Rodman Drake's classic fairy story in verse, "The Culprit Fay."

STORM KING

North of Old Cro' Nest, the dome-like bulk of Storm King guards the western bank of the "Northern Gateway to the Highlands of the Hudson." This great mass of rock towers 1,529 feet high. It was known to the early Dutch as The Klinkenberg (Echo Mount) and to later prosaic generations as Butter Hill from its fancied resemblance to a huge pat of butter. Storm King is an unfailing weather-gauge to the surrounding country and its present dignified name, given by the poet Nathaniel P. Willis, is singularly appropriate.

NORTHERN GATEWAY TO THE HIGHLANDS OF THE HUDSON

The majestic "Northern Gateway" rivals the "Southern Gateway" in grandeur. On the eastern bank the rugged front of Breakneck Mountain rises to a total height of 1,787 feet, a counterpart of Storm King on the opposite shore. Back of Breakneck appears the flank of Mount Taurus, and in the rear of Storm King looms the ridge of Old Cro' Nest and the hills of West Point in the distance. Pollopel's Island lies at the foot of Breakneck. It was once the custom among the old river captains to souze the new hands when passing Pollopel's to make them immune against the Highland goblins.

THE HUDSON FROM DOWNING PARK, NEWBRIGHT

In the distance is Tottel's Island and the "Northern Gateway to the Highlands," guarded by the Storm King and Breakneck Mountains.

WINTER VIEW FROM WASHINGTON HEIGHTS, NEWBRIGHT

Back of the Fishkill shore, opposite the village of Newburgh, is the Fishkill Island, so named from the signal fires lighted upon their summits to warn the Dutch of the approach of the English fleet in 1614.

WASHINGTON'S HEADQUARTERS, NEWBERRY

Located in the south-central part of the city. Was the headquarters of General Washington from April, 1793, to August, 1796. Now a valuable historical museum.

LOWER OF VICTORY, NEWBURGH

ed to commemorate the disbandment of the victorious American Army
rgh in 1783. It stands in the northeast corner of the Headquarters grounds,
53 feet high. In the center of the atrium is a bronze statue of Washington
monial cost \$17,000.

TEMPLE HILL MONUMENT, NEW WINDSOR

The camp ground of the American Army in 1782-3 was near Temple Hill a few miles
from Newburgh. Peace was proclaimed in a large public building on this eminence,
and from here the soldiers marched home on furloughs, which became perpetual.
This monument, erected by the people of the neighboring towns, marks the site.

THE POUGHKEEPSIE BRIDGE

The great cantilever bridge which spans the Hudson at Poughkeepsie is the admiration of all river travelers. It was finished January 1, 1889, at a cost of about \$3,500,000, and at that time was the longest bridge of its class in the world. The bridge is 12,908 feet long, and reaches from highland to highland at an elevation of 212 feet above the water. Several notoriety seekers have dropped from the center span to the river beneath and survived the experience. It is operated by the Central New England Railroad.

DUTCHESS COUNTY COURT HOUSE, POUGHKEEPSIE

Poughkeepsie is the shire town of Dutchess County. The commodious and artistic county court house was recently erected at a cost of over \$200,000. An ancient building on this site was the scene of the State Convention for the ratification of the Federal Constitution in 1788. This was a famous struggle in which Governor Clinton, John Jay, and Alexander Hamilton were the leading participants.

HUDSON RIVER STATE HOSPITAL, Poughkeepsie

A few miles north of Poughkeepsie the huge red buildings of the Hudson River State Hospital appear conspicuously. This is an institution for the reception of people afflicted with unbalanced mentalities, to be kept and nursed until restored to sanity or else proved incurably insane. Several hundred inmates are in the care of this hospital. The most advanced ideas in mental therapeutics obtain here. It is destined to be one of the largest asylums in the world.

RONDOUT CREEK AND THE HUDSON

In 1675 the Dutch New Netherland Company chose the meeting-place of the waters of Rondout Creek and the Hudson as the site of one of their fortified trading posts, hence the name of the town of Rondout, now incorporated as a part of the city of Kingston. Here landed the British expedition to destroy Kingston. The hills along Rondout Creek are noted for their cement rock which is mined, prepared for market and shipped in enormous quantities. The mouth of the Creek is well-protected by strong breakwaters and a lighthouse.

COL. WESSEL TEN BROECK, born at Westphalia 1655; erected this stone house about 1676. Wherein the SENATE of STATE or NEW YORK was held in the year of the adoption of its first Constitution 1777. Continued here until the burning of KINGSTON, October 16th, 1777.

FRONT AND REAR VIEWS OF THE OLD SENATE HOUSE, KINGSTON

The Old Senate House is the most interesting of the many historical buildings yet standing in Kingston. Here the twenty-four members of the first Senate of New York State met September 10, 1777, and were in session until the burning of the town by the British the following month. The sturdy walls of the old structure withstood the flames and it was repaired. It afterward became the home of Gen. John Armstrong, Secretary of War in President Madison's Cabinet. The State purchased the property a few years ago, and the building now contains a valuable museum of colonial and revolutionary relics.

LANDING OF A DAY LINER, KINGSTON POINT

Kingston Point, a steamer landing about a mile north of the ferry landing at Rondont, is a noteworthy summer resort of the Hudson. The Albany Day Line steamers do not enter Rondont Creek, but receive and deliver passengers at the new wharves at Kingston Point, to which the tracks of the Ulster and Delaware Railroad extend. Excursion trains are run to the Point daily from neighboring cities and towns and the Catskill Mountain trains connect on the wharf with the boats.

KINGSTON POINT, KINGSTON

One of the prettiest parks on the Hudson is maintained here. There is a long promenade on the edge of the water, boats, bathing, and various other amusements of a quiet nature. During the summer season Kingston Point is crowded daily by large parties from the interior and river towns. In the evening it is the favorite resort of the citizens of Kingston seeking coolness or recreation. The great natural beauty of the spot has not been sacrificed.

THE STATE CAPITOL, ALBANY

This splendid edifice is appropriately located upon the central hilltop of Albany, 155 feet above the Hudson, a conspicuous object from every approach to the city. It is considered the finest building in the world. The grounds embrace nearly eight acres, three of which are covered by the huge dimensions of the Capitol. It is built of solid Maine granite, in architectural plan a modified French Renaissance style, around a central square court. The cornerstone was laid with Masonic ceremonies in June, 1871. The estimate of the cost when entirely completed is about \$27,000,000.

THE SENATE CHAMBER, CAPITOL BUILDING, ALBANY

This palatial hall, located at the east end of the Capitol, is without a rival in the world as a legislative chamber. The light coming through great windows of stained glass shows a bewildering and sumptuous scheme of adornment in which the rarest marbles, finest onyx and massive carved oak beams are used with artistic judgment. The elaborately decorated ceiling, the arches of the galleries and the grand fireplaces on each side of the entrance are especial features of this peerless chamber.

THE COURT OF APPEALS, CAPITOL BUILDING, ALBANY

This magnificent court room is in the southeast corner of the third floor of the Capitol. It is 58.35 feet, of lofty proportions, and beautifully finished in oak. A grand fireplace of Siena marble and onyx is on the left side. The walls are adorned with valuable portraits of distinguished men and the windows are surmounted by carved stone. The seat of the justices of this highest of State Courts, and the rails that divide the panel work on the walls are also enriched with the most exquisite carving.

THE GOVERNOR'S ROOM, CAPITOL BUILDING, ALBANY

The Executive Chamber, in the southeast corner of the second or entrance floor of the Capitol, is 40x40 feet in size. The wainscoting, set in complete panels of mahogany, rises to a height of fifteen feet. Hangings of Spanish leather are above the line of carved molding that surmounts the wainscoting, and the ceiling is paneled in dark wood. A grand fireplace adds to the beauty of the room. The walls are hung with portraits of an historical and artistic value beyond estimate.

THE GOVERNOR'S MANSION, ALBANY

In a beautiful location on Eagle Street is the official home of the Governor of the Empire State, one of the finest residences in the country. It was purchased by the State in 1877, and has been used by every governor since that time, a period which includes two incumbents, Grover Cleveland and Theodore Roosevelt, who were afterward elected to the office of Chief Executive of the Nation

THE OLD STATE HOUSE, ALBANY

The first legislature to convene in Albany met in 1797. No especial building was completed for the use of the lawmakers until 1805 when the Old State House was erected on the hill in front of the site of the present magnificent State Capitol. In half a century the old structure became cramped quarters and in 1858 the legislature removed to the unfinished newer building. The Old State House is now used in connection with the Capitol by the State Comptroller and State Engineer.

ENTRANCE TO WATERVLIET ARSENAL, WATERVLIET

At Watervliet, across the Hudson from Troy, is located the famous Watervliet Arsenal, one of the great manufactories of the United States Government for the making of ordnance and ordnance supplies. Here is a thoroughly equipped modern gun-shop from which has been turned out the largest gun ever built in the world. The Arsenal and grounds now embrace about 100 acres of land. During the Civil War 1,500 men were employed here.

MAMMOTH 16-INCH GUN BUILT AT WATERVLIET ARSENAL.

This immense piece of ordnance, the largest gun ever cast, was built for service at Sandy Hook, N. J. It is 49 feet 3 inches long, weighs 257,000 pounds, being 4 feet in diameter through breech and 28 inches at muzzle. It throws a projectile 5 feet long, weighing 2,400 pounds, and requires 600 pounds of smokeless powder to each charge. The muzzle velocity of the projectile is 2,300 feet per second, and according to De Marre's formula it will penetrate 42.5 inches of steel at muzzle and 34.6 inches at a distance of two miles.

RENSSELAER COUNTY COURT HOUSE, TROY

Troy, located on the east bank about five miles above Albany, is one of the busiest cities on the Hudson. Among the many fine public buildings, the Rensselaer County Court House, erected at a cost of \$350,000, is the most striking. It contains county offices, the supreme court room with interesting portraits, and rooms of the county board of supervisors. It was built in 1898. The site was a gift of Jacob D. Van der Heyden, March 22, 1793. Here stood a whipping post and stocks about the year 1794. Occasionally criminals were publicly whipped by the sheriff or his deputy, the offenders severally receiving a number of lashes.

OLD WATERFORD BRIDGE

OLD BURDEN WATER WHEEL

BURDEN FALLS

INTERESTING SIGHTS NEAR TROY

The Old Waterford Bridge, crossing the Hudson between Troy and Waterford, was completed in 1894 at a cost of \$50,000. It is 800 feet long and 20 feet wide. For many years it was the finest bridge in the country. The Old Burden Water-wheel was designed and constructed by Henry Burden in 1838-39. This "Nagara of Water-wheels" is of the overshot variety, is 60 feet in diameter and has 1,200 horse power. Around the periphery are 36 buckets, 6 feet 3 inches deep. It is not used at this time. The Burden Falls are an interesting beauty spot south of Troy.

THE CITY OF COHOES "THE SPINDLE CITY"

The busy manufacturing city of Cohoes is located a few miles northwest of Troy on the banks of the Mohawk near its junction with the Hudson. Here are the great "Harmony Mills" which have 275,000 spindles, employ 3,240 persons, and turn out 1,600,000 yards of cotton goods each week. This view of the city is from Grand View Park, looking east. Bald Mountain is in the distance, the Erie Canal in the foreground.

COHOES FALLS ON THE MOHAWK, COHOES

These magnificent falls, 90 feet high, are situated less than a mile from the center of the city, and afford a cheap and never failing water power for the great manufactories of Cohoes. Near here the Mohawk River is crossed by a fine double-truss iron bridge, 500 feet long, from which the falls may be viewed in all their beauty. The Mohawk joins the Hudson through a series of branch streams, forming a number of interesting islands.

COOPER'S CAVE, GLENS FALLS

The historic town of Glens Falls is located on a line between Saratoga and Lake George on the banks of the upper Hudson. Here Fenimore Cooper laid the scene of his most popular novel, "The Last of the Mohicans." The rocky island of the story and the cavern in which the author caused Hawk-eye to conceal Heyward and his fair charges are visited by hundreds of travelers. The former now sustains the pier of a bridge spanning the river immediately above the fall.
